

Example

Simple example with a mermaid diagram:

Create a pdf version of it using the docker container pandoc-mermaid:

```
$ ls -l
```

```
$ docker run -ti --rm -u `id -u $USER` --cap-add=SYS_ADMIN -v $PWD:/u \
  pandoc-mermaid \
  pandoc --pdf-engine=xelatex \
  -F mermaid-filter \
  EXAMPLE.md -o example.pdf
```

```
$ ls -l example.pdf
```

The folder mermaid-images contains the extracted mermaid markdown and generated images and can be deleted after the run.
